CHEMICO-BIOLOGICAL INTERACTIONS

SUBJECT INDEX

VOLUME 71 (1989)

Adsorption, pentachlorophenol, ζ-potential, membrane phase transition, toxicity, 37
Age, in vivo/in vitro mutagenicity, dietary mutagens, hepatic metabolism, 367
Amines, nose, trigeminal nerve, lungs, vagal nerve, receptor, threshold limit values, 223
Amphotericin B, *Trypanosoma cruzi*, superoxide anion, fatty acids, 91
meso-Anthracenic, metabolism, 3-methylcholanthrene, cytosol, carcinogenesis, biooxidation, 393

Benzoquinones, irreversible inhibition, naphthoquinones, glutathione *S*-transferase, 381
Biooxidation, metabolism, 3-methylcholanthrene, cytosol, carcinogenesis, *meso*-anthracenic, 393
DL-Buthionine-SR-sulfoximine, 6,7-dimethoxy-2,2-dimethyl-2H-benzo[*b*]pyran, precocene II, hepatic centrolobular necrosis, glutathione depletion, L-2-oxothiazolidine-4-carboxylic acid, 187

Carcinogenesis, metabolism, 3-methylcholanthrene, cytosol, *meso*-anthracenic, biooxidation, 393
Carcinogenicity, mycotoxins, structure-activity, toxicity, mutagenicity, genotoxicity, mode of action, 105
Cell death, hepatocytes, disulfiram, vitamin E, lipid peroxidation, protein thiols, 291
Chemoprevention, selenite, selenoproteins, mammary epithelial cells, tumor promotion, 177
2-Chlorodeoxyadenosine, DNA double-strand breaks, cycloheximide, 167
Chromium, metabolism, NADPH cytochrome *P*-450 reductase, cytochrome *P*-450, cytochrome b_5, 213
Cisplatin, host-cell reactivation, DNA repair, human cell lines, cisplatin-treated adenovirus 5, 353
Cisplatin-treated adenovirus 5, host-cell reactivation, DNA repair, cisplatin, human cell lines, 353
Cycloheximide, 2-chlorodeoxyadenosine, DNA double-strand breaks, 167
Cysteamine, lipid peroxidation, thiols, glutathione, liver microsomes, 201
Cysteine *S*-conjugates, β-lyase, thiols, thioacylating intermediates, structure/activity, cytotoxicity, 79
Cytochrome b_5, chromium, metabolism, NADPH cytochrome *P*-450 reductase, cytochrome *P*-450, 213
Cytochrome *P*-450, chromium, metabolism, NADPH cytochrome *P*-450 reductase, cytochrome b_5, 213
Cytochrome *P*-450 inducers, tobacco-specific carcinogens, *N*-nitrosamine metabolism, 265
Cytosol, metabolism, 3-methylcholanthrene, carcinogenesis, *meso*-anthracenic, biooxidation, 393
Cytotoxicity, cysteine *S*-conjugates, β-lyase, thiols, thioacylating intermediates, structure/activity, 79
Cytotoxicity, naphthalene, epoxide, diffusion, glutathione, 1-naphthol, 147

Dietary mutagens, age, in vivo/in vitro mutagenicity, hepatic metabolism, 367
Diffusion, naphthalene, epoxide, glutathione, 1-naphthol, cytotoxicity, 147
6,7-Dimethoxy-2,2-dimethyl-2H-benzo[*b*]pyran, precocene II, hepatic centrolobular necrosis, glutathione depletion, DL-buthionine-SR-sulfoximine, L-2-oxothiazolidine-4-carboxylic acid, 187
Disulfiram, hepatocytes, vitamin E, lipid peroxidation, protein thiols, cell death, 291
DNA, respiratory tract, O^6-methylguanine, rats, type II alveolar cells, DNA repair, 255
DNA-drug interactions, sequence-specific

binding, foot-printing, minor-groove binding, intercalation, 311
DNA-strand breakage, oxidant tumor promotion, poly ADP-ribosylation, proto-oncogene (c-fos-), proto-oncogene (c-myc-), 339
DNA double-strand breaks, 2-chlorodeoxyadenosine, cycloheximide, 167
DNA interaction, glyoxylic compounds, nitroimidazole derivatives, radiosensitization mechanism, 245
DNA repair, DNA, respiratory tract, O^6-methylguanine, rats, type II alveolar cells, 255
DNA repair, host-cell reactivation, cisplatin, human cell lines, cisplatin-treated adenovirus 5, 353
Double strand breaks, mitomycin C, interstrand cross-links, free radical, resistance, glutathione-*S*-transferase, 63

Epoxide, naphthalene, diffusion, glutathione, 1-naphthol, cytotoxicity, 147

Fatty acids, *Trypanosoma cruzi*, amphotericin B, superoxide anion, 91
Fluorine, polycyclic aromatic hydrocarbons, ^{32}P-postlabelling, 279
Foot-printing, DNA-drug interactions, sequence-specific binding, minor-groove binding, intercalation, 311
Free radical, mitomycin C, interstrand cross-links, double strand breaks, resistance, glutathione-S-transferase, 63

Genotoxicity, mycotoxins, structure-activity, toxicity, mutagenicity, carcinogenicity, mode of action, 105
Glutathione, lipid peroxidation, thiols, cysteamine, liver microsomes, 201
Glutathione, naphthalene, epoxide, diffusion, 1-naphthol, cytotoxicity, 147
Glutathione-*S*-transferase, mitomycin C, interstrand cross-links, double strand breaks, free radical, resistance, 63
Glutathione depletion, 6,7-dimethoxy-2,2-dimethyl-2H-benzo[*b*]pyran, precocene II, hepatic centrolobular necrosis, DL-buthionine-SR-sulfoximine, L-2-oxothiazolidine-4-carboxylic acid, 187
Glutathione *S*-transferase, irreversible inhibition, benzoquinones, naphthoquinones, 381
Glyoxylic compounds, nitroimidazole derivatives, DNA interaction, radiosensitization mechanism, 245

Hepatic centrolobular necrosis, 6,7-dimethoxy-2,2-dimethyl-2H-benzo[*b*]pyran, precocene II, glutathione depletion, DL-buthionine-SR-sulfoximine, L-2-oxothiazolidine-4-carboxylic acid, 187
Hepatic metabolism, age, in vivo/in vitro mutagenicity, dietary mutagens, 367
Hepatocytes, disulfiram, vitamin E, lipid peroxidation, protein thiols, cell death, 291
Host-cell reactivation, DNA repair, cisplatin, human cell lines, cisplatin-treated adenovirus 5, 353
Human cell lines, host-cell reactivation, DNA repair, cisplatin, cisplatin-treated adenovirus 5, 353

Intercalation, DNA-drug interactions, sequence-specific binding, foot-printing, minor-groove binding, 311
Interstrand cross-links, mitomycin C, double strand breaks, free radical, resistance, glutathione-*S*-transferase, 63
In vivo/in vitro mutagenicity, age, dietary mutagens, hepatic metabolism, 367
Iron, oxygen radicals, lipid peroxidation, 1
Irreversible inhibition, benzoquinones, naphthoquinones, glutathione *S*-transferase, 381

Lipid peroxidation, hepatocytes, disulfiram, vitamin E, protein thiols, cell death, 291
Lipid peroxidation, iron, oxygen radicals, 1
Lipid peroxidation, thiols, glutathione, cysteamine, liver microsomes, 201
Liver microsomes, lipid peroxidation, thiols, glutathione, cysteamine, 201
Lungs, amines, nose, trigeminal nerve, vagal nerve, receptor, threshold limit values, 223
β-Lyase, cysteine *S*-conjugates, thiols, thioacylating intermediates, structure/activity, cytotoxicity, 79

Mammary epithelial cells, selenite, selenoproteins, tumor promotion, chemoprevention, 177
Mass spectrometry, terodiline, metabolism, microsomes, 325
Membrane phase transition, pentachlorophenol, ζ-potential, adsorption, toxicity, 37
Metabolism, chromium, NADPH cytochrome *P*-450 reductase, cytochrome *P*-450, cytochrome b_5, 213

Metabolism, 3-methylcholanthrene, cytosol, carcinogenesis, *meso*-anthracenic, biooxidation, 393
Metabolism, terodiline, mass spectrometry, microsomes, 325
3-Methylcholanthrene, metabolism, cytosol, carcinogenesis, *meso*-anthracenic, biooxidation, 393
O^6-Methylguanine, DNA, respiratory tract, rats, type II alveolar cells, DNA repair, 255
Microsomes, terodiline, metabolism, mass spectrometry, 325
Minor-groove binding, DNA-drug interactions, sequence-specific binding, footprinting, intercalation, 311
Mitochondria/oxidative phosphorylation, organotin thiocarbamates, protein kinase, 21
Mitomycin C, interstrand cross-links, double strand breaks, free radical, resistance, glutathione-*S*-transferase, 63
Mode of action, mycotoxins, structure-activity, toxicity, mutagenicity, genotoxicity, carcinogenicity, 105
Mutagenicity, mycotoxins, structure-activity, toxicity, genotoxicity, carcinogenicity, mode of action, 105
Mycotoxins, structure-activity, toxicity, mutagenicity, genotoxicity, carcinogenicity, mode of action, 105

NADPH cytochrome *P*-450 reductase, chromium, metabolism, cytochrome *P*-450, cytochrome b_5, 213
Naphthalene, epoxide, diffusion, glutathione, 1-naphthol, cytotoxicity, 147
1-Naphthol, naphthalene, epoxide, diffusion, glutathione, cytotoxicity, 147
Naphthoquinones, irreversible inhibition, benzoquinones, glutathione *S*-transferase, 381
Nitroimidazole derivatives, glyoxylic compounds, DNA interaction, radiosensitization mechanism, 245
N-Nitrosamine metabolism, tobacco-specific carcinogens, cytochrome *P*-450 inducers, 265
Nose, amines, trigeminal nerve, lungs, vagal nerve, receptor, threshold limit values, 223

Organotin thiocarbamates, mitochondria/oxidative phosphorylation, protein kinase, 21
Oxidant tumor promotion, poly ADP-ribosylation, proto-oncogene (c-fos-), proto-oncogene (c-myc-), DNA-strand breakage, 339
L-2-Oxothiazolidine-4-carboxylic acid, 6,7-dimethoxy-2,2-dimethyl-2H-benzo[*b*]pyran, precocene II, hepatic centrolobular necrosis, glutathione depletion, DL-buthionine-SR-sulfoximine, 187
Oxygen radicals, iron, lipid peroxidation, 1

Pentachlorophenol, ζ-potential, adsorption, membrane phase transition, toxicity, 37
Polycyclic aromatic hydrocarbons, fluorine, ^{32}P-postlabelling, 279
Poly ADP-ribosylation, oxidant tumor promotion, proto-oncogene (c-fos-), proto-oncogene (c-myc-), DNA-strand breakage, 339
^{32}P-Postlabelling, fluorine, polycyclic aromatic hydrocarbons, 279
ζ-Potential, pentachlorophenol, adsorption, membrane phase transition, toxicity, 37
Precocene II, 6,7-dimethoxy-2,2-dimethyl-2H-benzo[*b*]pyran, hepatic centrolobular necrosis, glutathione depletion, DL-buthionine-SR-sulfoximine, L-2-oxothiazolidine-4-carboxylic acid, 187
Protein kinase, organotin thiocarbamates, mitochondria/oxidative phosphorylation, 21
Protein thiols, hepatocytes, disulfiram, vitamin E, lipid peroxidation, cell death, 291
Proto-oncogene (c-fos-), oxidant tumor promotion, poly ADP-ribosylation, proto-oncogene (c-myc-), DNA-strand breakage, 339
Proto-oncogene (c-myc-), oxidant tumor promotion, poly ADP-ribosylation, proto-oncogene (c-fos-), DNA-strand breakage, 339

Radiosensitization mechanism, glyoxylic compounds, nitroimidazole derivatives, DNA interaction, 245
Rats, DNA, respiratory tract, O^6-methylguanine, type II alveolar cells, DNA repair, 255
Receptor, amines, nose, trigeminal nerve, lungs, vagal nerve, threshold limit values, 223
Resistance, mitomycin C, interstrand cross-links, double strand breaks, free radical, glutathione-*S*-transferase, 63
Respiratory tract, DNA, O^6-methylguanine, rats, type II alveolar cells, DNA repair, 255

Selenite, selenoproteins, mammary epithelial cells, tumor promotion, chemoprevention, 177
Selenoproteins, selenite, mammary epithelial cells, tumor promotion, chemoprevention, 177
Sequence-specific binding, DNA-drug interactions, foot-printing, minor-groove binding, intercalation, 311
Structure-activity, mycotoxins, toxicity, mutagenicity, genotoxicity, carcinogenicity, mode of action, 105
Structure/activity, cysteine *S*-conjugates, β-lyase, thiols, thioacylating intermediates, cytotoxicity, 79
Superoxide anion, *Trypanosoma cruzi*, amphotericin B, fatty acids, 91

Terodiline, metabolism, mass spectrometry, microsomes, 325
Thioacylating intermediates, cysteine *S*-conjugates, β-lyase, thiols, structure/activity, cytotoxicity, 79
Thiols, cysteine *S*-conjugates, β-lyase, thioacylating intermediates, structure/activity, cytotoxicity, 79
Thiols, lipid peroxidation, glutathione, cysteamine, liver microsomes, 201
Threshold limit values, amines, nose, trigeminal nerve, lungs, vagal nerve, receptor, 223
Tobacco-specific carcinogens, *N*-nitrosamine metabolism, cytochrome *P*-450 inducers, 265
Toxicity, mycotoxins, structure-activity, mutagenicity, genotoxicity, carcinogenicity, mode of action, 105
Toxicity, pentachlorophenol, ζ-potential, adsorption, membrane phase transition, 37
Trigeminal nerve, amines, nose, lungs, vagal nerve, receptor, threshold limit values, 223
Trypanosoma cruzi, amphotericin B, superoxide anion, fatty acids, 91
Tumor promotion, selenite, selenoproteins, mammary epithelial cells, chemoprevention, 177
Type II alveolar cells, DNA, respiratory tract, O^6-methylguanine, rats, DNA repair, 255

Vagal nerve, amines, nose, trigeminal nerve, lungs, receptor, threshold limit values, 223
Vitamin E, hepatocytes, disulfiram, lipid peroxidation, protein thiols, cell death, 291
